WEED WIPER

RoCo Wiper is the preferred mechanical wiper approved by herbicide application regulating organisations.

Fast economical and environmental friendly contact application of herbicide to tall weeds.

Economical because chemical is only applied to unwanted plants, cheaper non selective herbicide can be used with the RoCo Wiper with no risk of drifting or over spraying.

Land infested with weeds can be quickly and economically reclaimed.

The RoCo Wiper System

Each unit consist of a roller wetted by a manually controlled 12V pump. A special made roller material ensures maximum chemical transfer whilst minimising damaging drips. The rotating roller does no physical damage to the plant, so that the herbicide can be transported to the roots. Only when the plant touches the roller, the herbicide is released by the special roller material to the underside of the leaves and stems.

Features:

- Top design and use of materials gives strength which is vital for use on uneven fields. Light weight design makes it manoeuvrable and reduces the load on ATVs.
- Any maintenance which may be required can be done on the farm.
- Easy folding draw bar allows for compact storage. Transportation easily handled by one man.
- Easily removable tank and pump can be used as a Spot Sprayer.
- Rotation roller prevents dripping
- Herbicide is applied only to tall weeds
- Herbicide usage is related to density of weeds
- Herbicide mix is applied to underside of leaves, which absorb best, giving most effective kill.
